The LRM 2200SI combines excellent 7x optics with the world's most advanced laser rangefinder technology. Revised approaches in optical and electronic engineering allow target acquisition at longer distances with better reliability under a wider range of weather conditions. This model allows observation of distant objects with superb image quality plus it measures the distance to the object up to 2,200 meters (output display in yards also). The LRM 2200SI has a built-in inclinometer to measure the angle to the object, as well as speed detecting capability. Aim and click - and you have everything you want about your target.
